

Introduction to Enterprise Objects Framework

Session 703

Introduction to Enterprise Objects Framework

James Dempsey
Operations Engineer
Apple Software Customer Seeding

What You'll Learn

- An overview of the purpose and benefits of EOF
- Introduction to basic database operations
- Working with persistent objects
- Demonstration of desktop EOF applications
- A conceptual model of how EOF works

Technology Framework

- An introduction to the EOAccess and EOControl frameworks of EOF
- These frameworks form the core of database access in
 - HTML and XML-based WebObjects applications
 - Cocoa EOF applications
 - Java Client applications

Object-Oriented Applications

Employee	
firstName	"Fred"
startDate	4/29/00
salary	60,000
department	

Department	
name	"Sales"
budget	1,000,000

- Different classes of objects to model different types
- Each object stores data
- Each class of object has behavior—business logic
- How does object state persist between uses?

Database-Driven Applications

EMPLOYEE				
E_ID	NAME	SALRY	SDATE	DEPT_ID
101	Fred	60,000	4/29/00	503
102	Beth	65,000	1/19/00	501

DEPARTMENT		
DEPT_ID	NAME	BUDGET
501	R&D	4,000,000
502	Sales	1,200,000

- Different tables model different types of data
- Each row stores data
- Database can execute stored procedures
- How to use the data in an object-oriented manner?

Enterprise Objects Framework

An object-relational persistence layer

- Uses the natural mapping between objects and relational databases
- Abstracts business logic and database operations
- Preserves object-oriented nature of persistent objects
- Sophisticated, mature, object-oriented architecture

Enterprise Objects

Affectionately known as EOs

Employee	
firstName	"Fred"
startDate	4/29/00
salary	60,000
department	<input type="checkbox"/>

- Implement the EOEnterpriseObject interface
- Objects with built-in persistence

Entities and Attributes

Employee	
firstName	"Fred"
startDate	4/29/00
salary	60,000
department	<input type="checkbox"/>

Employee	
firstName	"Beth"
startDate	1/19/00
salary	65,000
department	<input type="checkbox"/>

EMPLOYEE				
EMP_ID	NAME	SALARY	ST_DATE	DEPT_ID
101	Fred	60,000	4/29/00	503
102	Beth	65,000	1/19/00	501

Relationship by Reference

A unique reference to another object

Relationship by Join

A unique primary key value in another table

EMPLOYEE				
EMP_ID	NAME	SALARY	ST_DATE	DEPT_ID
101	Fred	60,000	4/29/00	503
102	Beth	65,000	1/19/00	501

DEPARTMENT		
DEPT_ID	NAME	BUDGET
501	R&D	4,000,000
502	Sales	1,200,000

From Row to EO and Back

Employee	
firstName	"Fred"
startDate	4/29/00
salary	60,000
department	<input type="checkbox"/>

EMPLOYEE				
EMP_ID	NAME	SALARY	ST_DATE	DEPT_ID
101	Fred	60,000	4/29/00	503

Model Defines the Mapping

Define object-relational mapping in EOModeler

Movie Attributes

Name	Value Class	Column	External Type	Width
category	NSString	CATEGORY	char	20
dateReleased	NSDate	DATE_RELEASED	datetime	
movieID	NSNumber	MOVIE_ID	long	
posterName	NSString	POSTER_NAME	char	255
rated	NSString	RATED	char	10
revenue	NSNumber	REVENUE	money	
studioID	NSNumber	STUDIO_ID	long	
title	NSString	TITLE	char	255

Movie Relationships

Name	Destination	Source Att	Dest Att
directors	Talent		
plotSummary	PlotSummary	movieID	movieID
reviews	Review	movieID	movieID
roles	MovieRole	movieID	movieID
studio	Studio	studioID	studioID

Multiple Views, Same Data

Application

Database

Multiple Data Sources

Using data from different sources abstracted at a low level—programmatically interface remains the same

Separate 'Scratch Pad' Per User

Each user provided a separate context for making edits and canceling changes

Basic EOF Operations

- Fetch
- Insert
- Update
- Delete
- Save
- Revert

EOEditingContext

The class you use most for programmatic control

EOEditingContext

- Fetches from the database
- Observes updates to all EOs it has fetched
- Tracks inserts and deletes
- Keeps changes until they are saved or reverted

Getting an Editing Context

- Every session in a WebObjects application has a default editing context

```
EOEditingContext ec =  
    session().defaultEditingContext();
```

- Editing context for desktop apps lives in nib file
- You can create your own as well

```
EOEditingContext ec =  
    new EOEditingContext();
```

Locking the Editing Context

For use with multi-threaded applications

- Default editing context is automatically locked and unlocked in WebObjects applications
- Nib-based editing contexts not locked by default
- Lock and unlock editing contexts that you create before and after use

```
ec.lock();  
    // use editing context  
ec.unlock();
```

Fetching

Many techniques — all with same underlying steps

- Create a fetch specification
- Access an editing context
- Tell editing context to fetch using the specification
- Receive an array of retrieved Enterprise Objects

Graphical Fetch Builder

Define fetch graphically in EOModeler

The screenshot shows the EOModeler graphical fetch builder interface. The window title is `~/JavaRealEstate/RealEstate.eomodeld`. The left sidebar displays a tree view of the `RealEstate` model, including entities like `Administrator`, `Agent`, `AgentPhoto`, `AgentRating`, `ContactInfo`, `ContactType`, `Customer` (with sub-entities `agent`, `contactInfo`, `defaults`, `suggestedPr`, `suggestions`), `Feature`, `Property`, `PropertyAddress`, `PropertyFeature`, `PropertyPhoto`, `PropertyType`, `Rating`, `Suggestion`, `User`, `UserDefaults`, and `Stored Procedure`.

The main area is titled "Fetch Specification Name: Customer Search". It has several tabs: `Qualifier` (selected), `Sort Ordering`, `Prefetching`, `Raw Fetch`, `Options`, and `SQL`.

Under the `Qualifier` tab, the entity `Customer` is selected. A list of attributes is shown with a vertical scrollbar: `agent`, `agentID`, `contactInfo`, `defaults`, `firstName`, and `lastName`.

Below the list are several buttons: `=`, `⊖`, `⊕`, `⊖`, `⊕`, and `like`.

The main area contains the following SQL query:

```
OR ((firstName like $firstName) and (lastName like $lastName))  
(agent.lastName like $agentName)
```

At the bottom, there are buttons for `And`, `Or`, `Not`, and `Remove`.

Performing the Fetch

- Fetching returns an array of EOs

```
EOFetchSpecification spec;  
NSDictionary bindings;  
NSArray results;
```

```
EOEditingContext ec =  
    session().defaultEditingContext();
```

```
results =  
    EOUtilities.  
        objectsWithFetchSpecificationAndBindings  
            (ec, “Customer”, “FetchSpec”, bindings);
```

Creating and Inserting

- Two separate steps combined in one convenience method

```
EOEnterpriseObject eo;  
EOEditingContext ec;
```

```
eo =  
    EOUtilities.createAndInsertInstance  
        (ec, "Employee");
```

Deleting

- Tell the editing context to delete the object;
It will be deleted next time changes are saved

```
EOEnterpriseObject eo;  
EOEditingContext ec;
```

```
ec.deleteObject(eo);
```

Editing

- Make changes using standard accessors—the editing context observes all changes

```
Employee employee;
```

```
employee.setName("Jerry Long");
```

- Key Value Coding provides generic accessors

```
employee.takeValueForKey("Jerry Long", "name");
```

```
employee.valueForKey("name");
```

Saving and Reverting Changes

- Pending changes are not sent to the database until you tell editing context to save changes

editingContext.saveChanges();

- Pending changes are discarded by telling the editing context to revert

editingContext.revert();

Demo

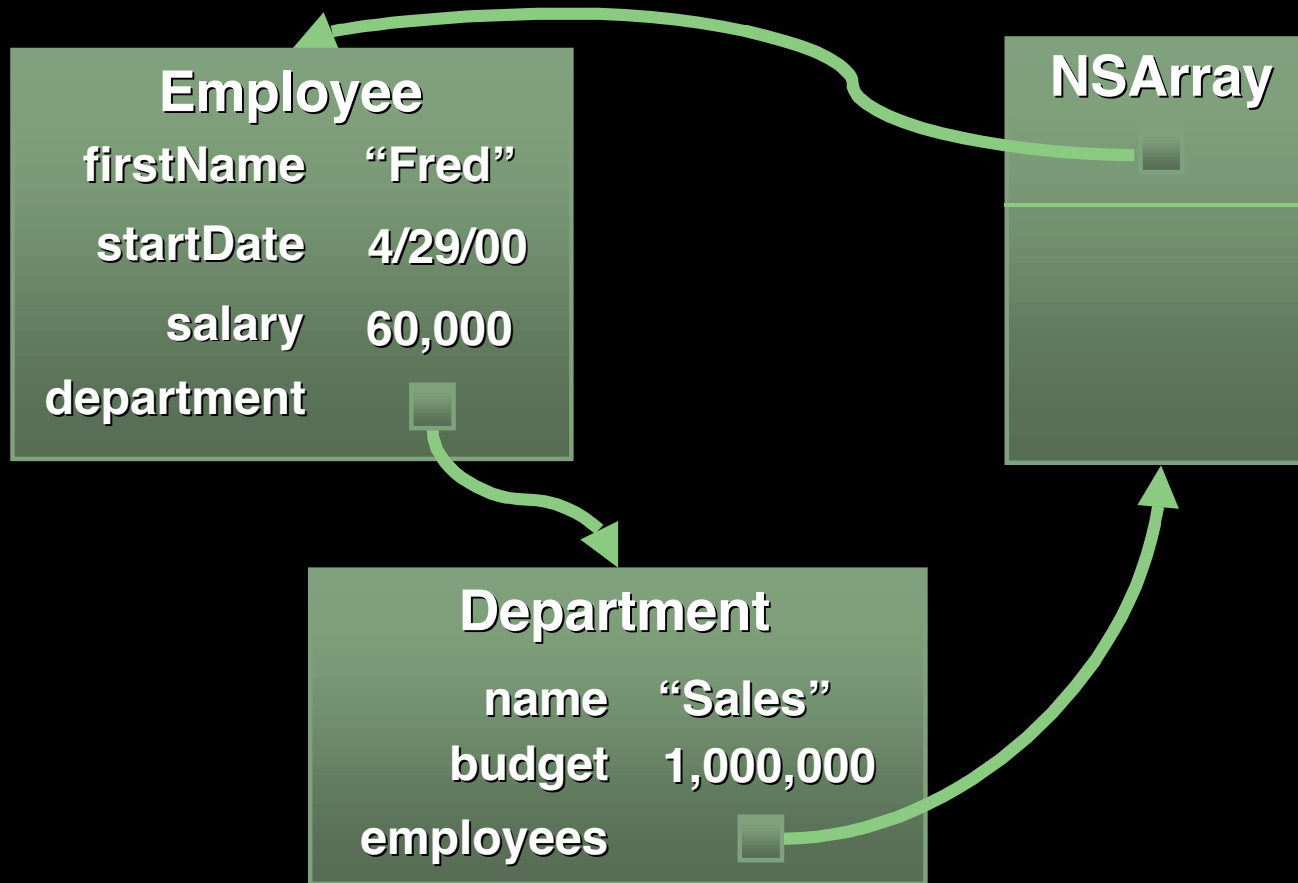

Genevieve Purugganan
WebObjects Engineering

Using EOs as Objects

- Subclass EOGenericRecord and add class-specific business logic and validation logic
- Call methods, put 'em in collections, hook 'em up to user interface elements
- Think about them as objects, and leave the database concepts in the database
- Example: Relationships

An Example Relationship

An Example

Some SQL

```
SELECT t0.Comments, t0.CreatedBy,  
t0.CreatedByMethod, t0.CreationDate, t0.ID,  
t0.PortallInvitationText, t0.ModificationDate,  
t0.ModifiedBy, t0.ModifiedByMethod,  
t0.PrimarySeedEngineer, t0.ProjectDescription,  
t0.ProjectInternalName, t0.ProjectName, t0.Status  
FROM Projects t0 WHERE t0.Status = "Active"
```

Some SQL

```
SELECT t0.ParticipantProjectMailingAddressID,  
t0.Comments, t0.CreatedBy, t0.CreatedByMethod,  
t0.CreationDate, t0.DefaultConfigurationID,  
t0.ParticipantProjectEmailAddressID, t0.Grade, t0.ID,  
t0.ModificationDate, t0.ModifiedBy,  
t0.ModifiedByMethod, t0.NumBugsSubmitted,  
t0.NumDiscussionEntries, t0.NumIssuesSubmitted,  
t0.NumSurveysCompleted,  
t0.NumSurveysRequested, t0.ParticipantEndDate,  
t0.ParticipantID, t0.ParticipantStartDate, t0.ProjectID,  
t0.RanWizard, t0.Status FROM ParticipantProjects t0  
WHERE t0.ID = 9145
```

Some SQL

```
SELECT t0.AgeRange, t0.Comments, t0.Company,  
t0.CreatedBy, t0.CreatedByMethod, t0.CreationDate,  
t0.PrimaryTestingEnvironment, t0.FileMakerID,  
t0.FirstName, t0.Gender, t0.ID, t0.JobTitle,  
t0.LastName, t0.MiddleInitial, t0.ModificationDate,  
t0.ModifiedBy, t0.ModifiedByMethod,  
t0.NDADateSigned, t0.NDAVersion, t0.NickName,  
t0.Occupation, t0.ParticipantGrade,  
t0.ProgramStatus, t0.Salutation,  
t0.SelectionJustification FROM Participants t0  
WHERE t0.ID = 9145
```

Some SQL

```
SELECT t0.CreatedBy, t0.CreatedByMethod,  
t0.CreationDate, t0.EmailDescription,  
t0.EmailAddress, t0.ID, t0.IsDefault,  
t0.EmailAddressIsInvalid, t0.ModificationDate,  
t0.ModifiedBy, t0.ModifiedByMethod, t0.ParticipantID  
FROM ParticipantEmailAddresses t0 WHERE  
t0.ParticipantID = 1516
```

Or a Key Path

- Attach a user interface element

project.employee.emailAddress.email

Demo

Genevieve Purugganan
WebObjects Engineering

Desktop Database Applications

A user interface challenge beyond the web

- Event driven applications demand a more dynamic interface than the web
- In Model-View-Controller design pattern, much controller code is synching view to model
- EOInterface abstracts much of this controller work

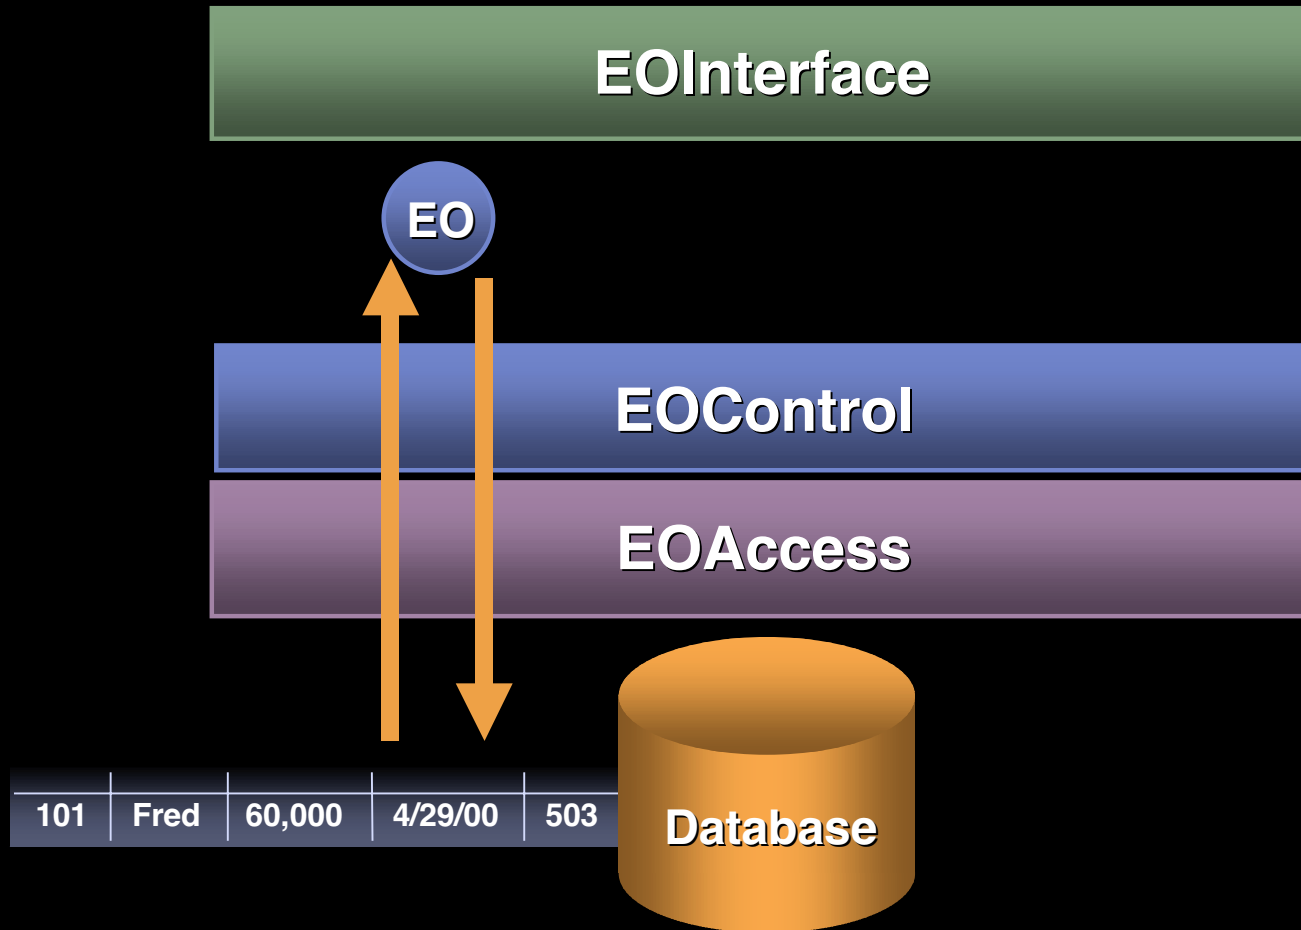

Demo

WebObjects Engineering

The EOF Stack

Who are the frameworks in your neighborhood?

EOAccess Framework

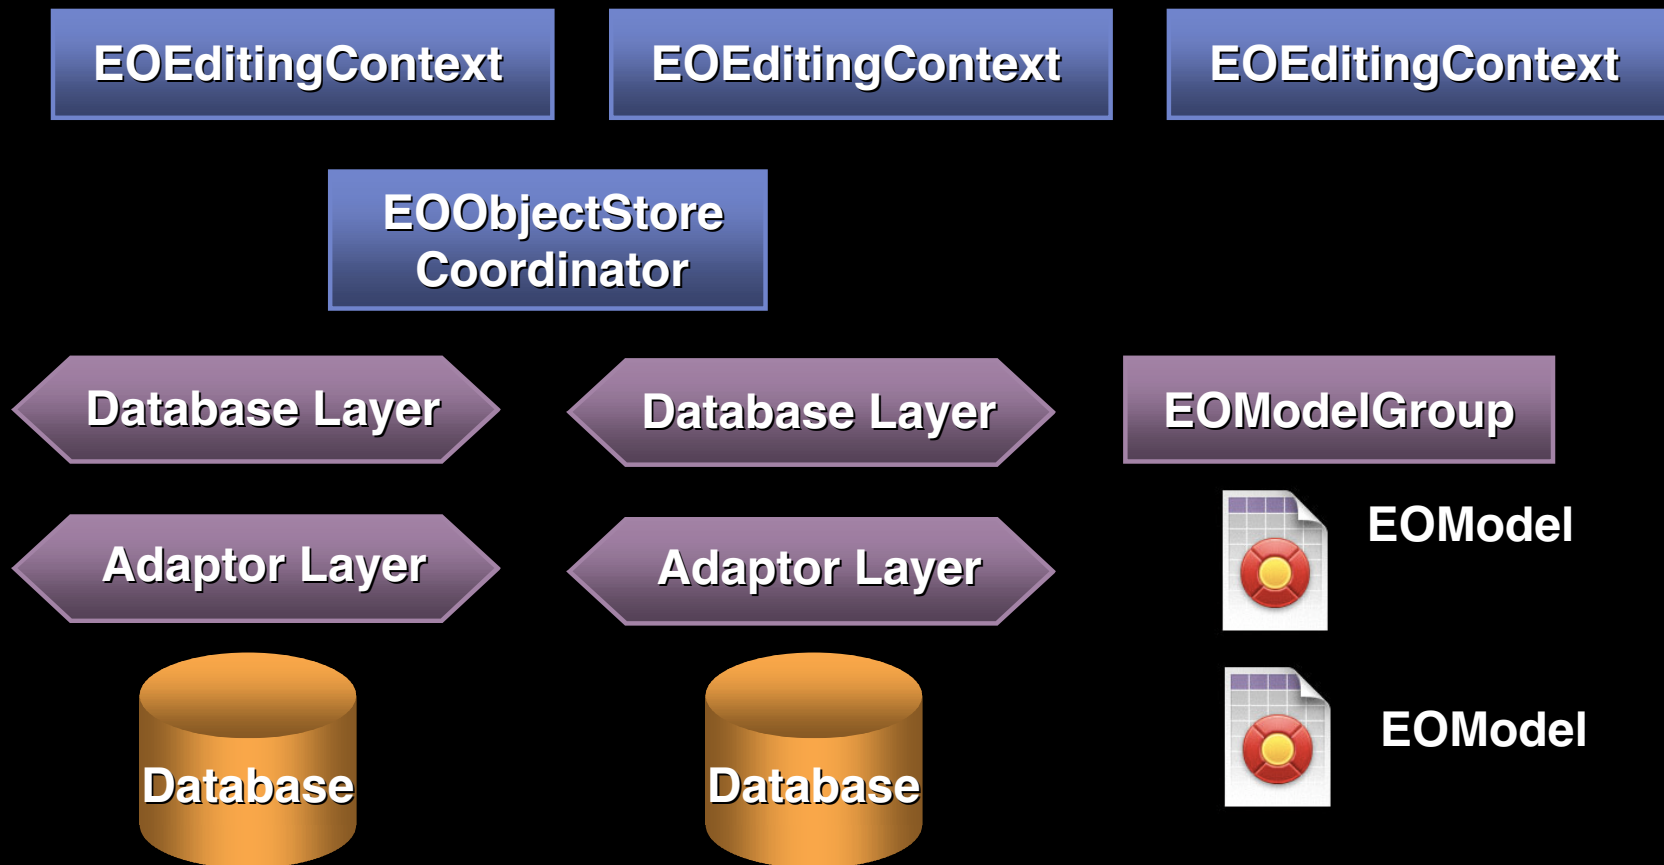

Multiple Data Sources

Multiple EOModels, one per data source

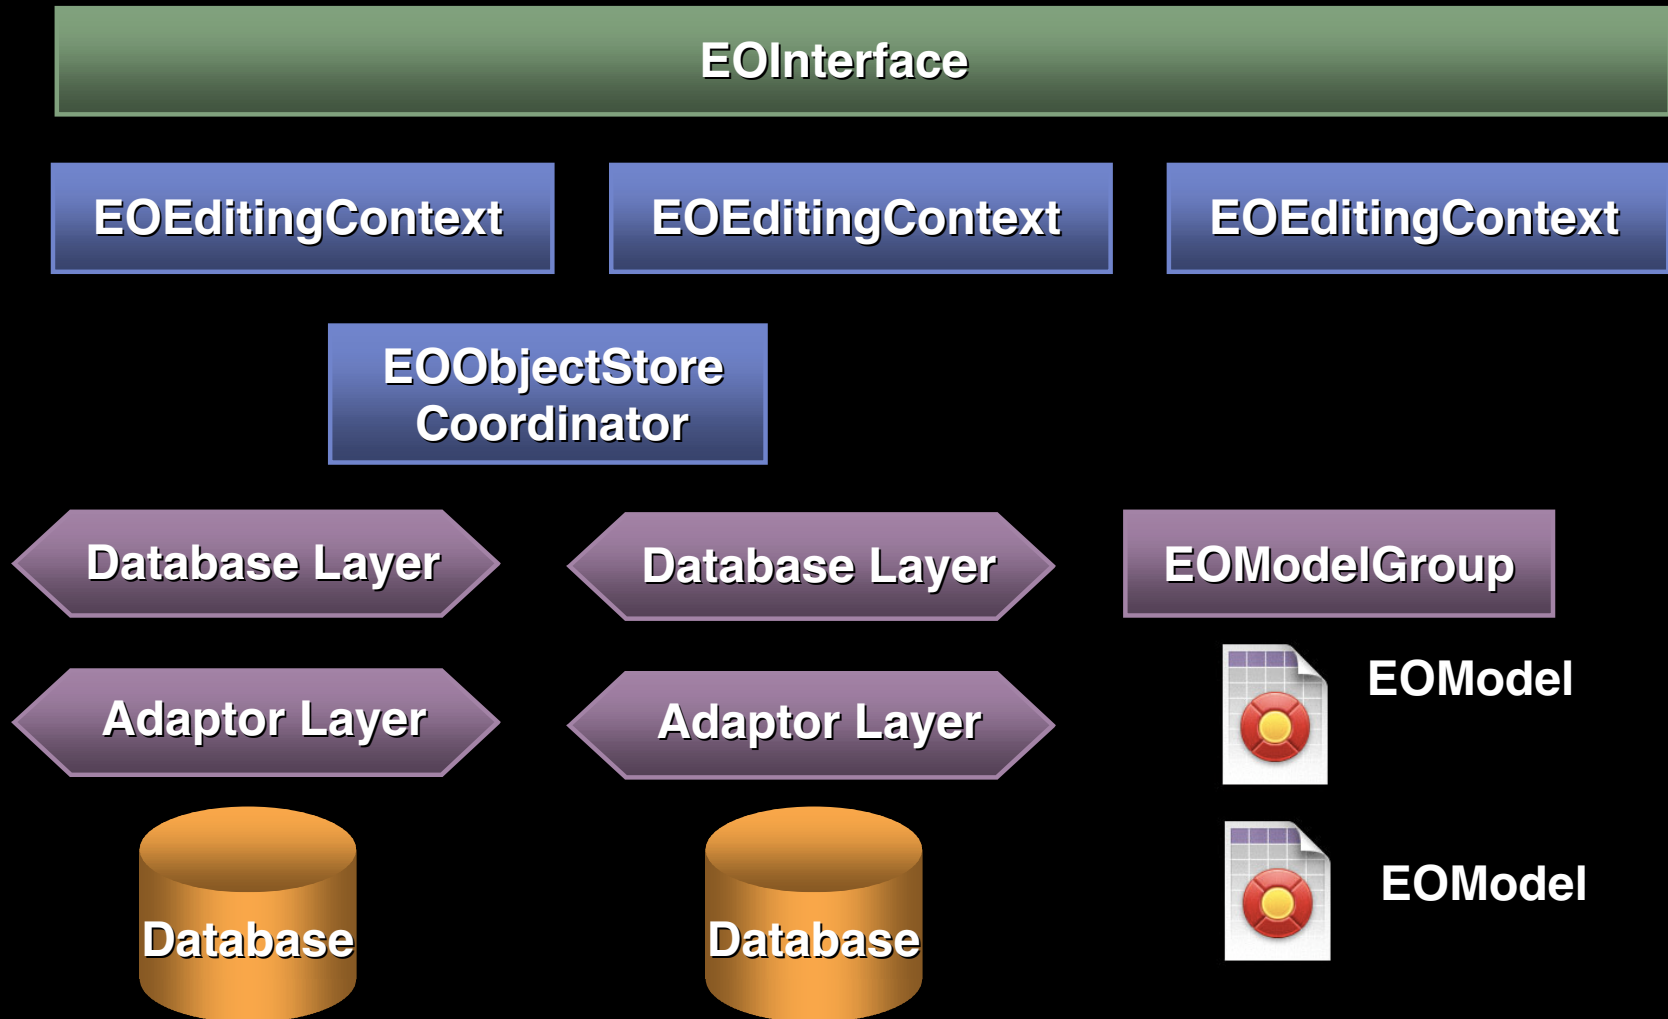

EOControl Framework

EOAccess coordination and programming control

EOInterface Framework

Review

WebObjects Lab

- Located downstairs in Room L
- Lab hours
 - Monday 12:00pm–6:00pm
 - Tuesday 9:00am–2:00pm*
 - Wednesday 9:00am–6:00pm
 - Thursday 9:00am–6:00pm
 - Friday 9:00am–6:00pm

*Conversion Workshop Tuesday 2-6pm; Sign up in Lab
